

Geology and Economic Potential of Barite Mineralization on Gombe Inlier, Gombe State, Nigeria

Filesize: 2.33 MB

Reviews

A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest ebook i have read during my very own daily life and could be the best ebook for possibly.

(Mitchell Kuhn III)

GEOLOGY AND ECONOMIC POTENTIAL OF BARITE MINERALIZATION ON GOMBE INLIER, GOMBE STATE, NIGERIA

To save **Geology and Economic Potential of Barite Mineralization on Gombe Inlier, Gombe State, Nigeria** eBook, remember to refer to the web link below and save the file or gain access to additional information which are have conjunction with GEOLOGY AND ECONOMIC POTENTIAL OF BARITE MINERALIZATION ON GOMBE INLIER, GOMBE STATE, NIGERIA ebook.

GRIN Verlag Apr 2013, 2013. Taschenbuch. Book Condition: Neu. 210x148x6 mm. This item is printed on demand - Print on Demand Neuware - Research Paper from the year 2007 in the subject Geography / Earth Science - Geology, Mineralogy, Soil Science, grade: A, Abubakar Tafawa Balewa University, course: Applied Geology - Economic Geology/ Mineral Exploration, language: English, comment: Barite Mineralization on Gombe inlier is structurally controlled and silicification within the fractures are the chemical control for the mineralization. the trend of the barite mineralization conform with the larger structural trend of the Benue trough in northeast-southwest direction. , abstract: Barite (BaSO_4) mineralization occurs within Pan African fracture systems in the Gombe inlier. Gombe Inlier is a Basement dome within the Gongola Basin (Upper Benue trough in Nigeria) which exposes most of the stratigraphic sequence (Bima Sandstone, Yolde Formation, Pindiga Formation and Gombe Sandstone). Fieldwork was conducted from March 23rd 29th 2007, 20 minerals and rock samples were taken from the veins and host rocks, and then Geochemical, petrographic and structural analysis were conducted to ascertain the quality of barite, associated minerals, nature of host rock and also the type of chemical as well as structural barriers for the mineralization. The results shows that the principal planar planes hosting mineralizations were found to trend mostly in NE WSW direction which conforms well in smaller scale with the trend of strike slip faults that faulted the inlier and on a larger scale conforms with the general trend of the Benue trough. The fractures are therefore probably subordinate to the general structural trend of the Benue trough. The main associated mineralization was inferred to be anhydrite (CaSO_4) which is also a sulphate like barite. This suggest competition for SO_3^{2-} by Ba^{2+} and Ca^{2+} but the deeper fractures host barite because Ba^{2+} originate from...
